"Peregrine BI is a dynamic new entrant in the Business Intelligence marketplace. Its innovative and enterprise-wide visibility provides both management and business process owners the ability to quickly identify and manage tactical process constraints while ensuring that implemented optimization solutions deliver the benefits as promised. This ensures sustainability and assists in meeting mandated corporate governance requirements."

Ann Grackin
CEO - Chain Link Research

Discover The Hidden Opportunities

Studies show that 80 to 95 percent of the Order-to-Cash process time consists of either non value-added activities or waiting time. This typically causes

- ⇒ Inflated inventories
- ⇒ On time deliveries issues
- ⇒ Increases cost of quality
- ⇒ Increased costs
- ⇒ Additional supervisory time

Peregrine BI provides the goal-based, enterprise-wide visibility to quickly identify the critical core business process constraints inhibiting revenue and earning growth. **Peregrine BI** quickly assists in identifying hidden problem areas and provide a foundation to achieve ongoing Product Development and Order-to-Cash process time reductions. The results are often dramatic. Even relatively small improvements in overall process time can yield millions in savings immediately and recurring over time. Furthermore, business process optimization methodologies often fall significantly short of projections. The failure to implement real-time metrics and strong process disciplines may create new problems or shift removed constraints to other business processes.

Real-Time Performance Visibility

Most organizations measure process time after the fact. Peregrine BI is unique in its use of real-time data to measure the entire organization, any business unit, grouping of individual processes. This provides a view of overall process performance efficiency utilizing graphical and numerical data to quickly illustrate business process constraints and areas for improvements.

Order-to-Cash

Manufacturing

Fabrication

Etching

Peregrine BI is uniquely designed to provide:

- Manageable and actionable information
- Business process vs. transactional performance analysis
- Quickly identify process constraints at all levels
- Achievable optimization performance goals
- Ensure removed constraints do not migrate to another business process or creates a new constraints
- Assist in ensuring discipline of enhanced IT systems and business processes improvements
- Assist in creating synergized organizations

With **Peregrine BI**, performance deficiencies are uncovered prior to becoming unmanageable. Resources can be targeted to the problem areas without creating constraints in other areas. The results are faster response times and increased working capital utilization, leading to lower costs, improved bottom-line results, improved customer service, and increased shareholder value.
